## A. Joysticks

time limit per test: 1 second  
 memory limit per test: 256 megabytes  
 input: standard input  
 output: standard output

Friends are going to play console. They have two joysticks and only one charger for them. Initially first joystick is charged at  $a_1$  percent and second one is charged at  $a_2$  percent. You can connect charger to a joystick only at the beginning of each minute. In one minute joystick either discharges by 2 percent (if not connected to a charger) or charges by 1 percent (if connected to a charger).

Game continues while both joysticks have a positive charge. Hence, if at the beginning of minute some joystick is charged by 1 percent, it has to be connected to a charger, otherwise the game stops. If some joystick completely discharges (its charge turns to 0), the game also stops.

Determine the maximum number of minutes that game can last. It is prohibited to pause the game, i. e. at each moment both joysticks should be enabled. It is allowed for joystick to be charged by **more than 100 percent**.

### Input

The first line of the input contains two positive integers  $a_1$  and  $a_2$  ( $1 \leq a_1, a_2 \leq 100$ ), the initial charge level of first and second joystick respectively.

### Output

Output the only integer, the maximum number of minutes that the game can last. Game continues until some joystick is discharged.

### Examples

input	<a href="#">Copy</a>
3 5	
output	<a href="#">Copy</a>
6	

input	<a href="#">Copy</a>
4 4	
output	<a href="#">Copy</a>
5	

### Note

In the first sample game lasts for 6 minute by using the following algorithm:

- at the beginning of the first minute connect first joystick to the charger, by the end of this minute first joystick is at 4%, second is at 3%;
- continue the game without changing charger, by the end of the second minute the first joystick is at 5%, second is at 1%;
- at the beginning of the third minute connect second joystick to the charger, after this minute the first joystick is at 3%, the second one is at 2%;
- continue the game without changing charger, by the end of the fourth minute first joystick is at 1%, second one is at 3%;
- at the beginning of the fifth minute connect first joystick to the charger, after this minute the first joystick is at 2%, the second one is at 1%;
- at the beginning of the sixth minute connect second joystick to the charger, after this minute the first joystick is at 0%, the second one is at 2%.

After that the first joystick is completely discharged and the game is stopped.

### Codeforces Round #345 (Div. 2)

### → Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
