## SEQ - Recursive Sequence

#recursion (/problems/tag/recursion)

Sequence  $(a_i)$  of natural numbers is defined as follows:

$$a_i = b_i \text{ (for } i \leq k)$$

$$a_i = c_1 a_{i-1} + c_2 a_{i-2} + \dots + c_k a_{i-k} \text{ (for } i > k)$$

where  $b_j$  and  $c_j$  are given natural numbers for  $1 \leq j \leq k$ . Your task is to compute  $a_n$  for given  $n$  and output it modulo  $10^9$ .

### Input

On the first row there is the number  $C$  of test cases (equal to about 1000).

Each test contains four lines:

$k$  - number of elements of  $(c)$  and  $(b)$  ( $1 \leq k \leq 10$ )

$b_1, \dots, b_k$  -  $k$  natural numbers where  $0 \leq b_j \leq 10^9$  separated by spaces

$c_1, \dots, c_k$  -  $k$  natural numbers where  $0 \leq c_j \leq 10^9$  separated by spaces

$n$  - natural number ( $1 \leq n \leq 10^9$ )

### Output

Exactly  $C$  lines, one for each test case:  $a_n$  modulo  $10^9$

### Example

**Input:**

```
3
3
5 8 2
32 54 6
2
3
1 2 3
4 5 6
6
3
24 354 6
56 57 465
98765432
```

**Output:**

```
8
714
257599514
```
